

SQUITO NET

Squito Net is a product that would be made of an elastic fabric or a blend of fabrics. The Squito Net will be made to fit the window portion of a vehicles door. It's purpose will be to keep flying insect pest out of the vehicle, while allowing cool air to flow through the vehicle. The net would be used at drive-in movies, camp sites, or just at the park. The net would be double nitted at the corner tip and opening to prevent breaking or tears in it when placing over the window of a vehicles door. The net will come in small to large fitting size for different size vehicle windows. The Squito Net will extend down the window portion much like a woman's nylon stocking, and it's appearance would look much like window tinting.
